

SUMMARY OF INJECTION STEPS

This summary does not replace the complete and detailed injection instructions found in the following: the FUZEON *Injection Instructions* that comes with your medicine, the *How to Prepare and Inject FUZEON* video, and in *Your Guide to Taking FUZEON*.

Remember: Always change injection sites and write them in your FUZEON Planner.

Get Started

1. Gather supplies
2. Open syringe packages and remove vial caps
3. Wash hands
4. Clean rubber tops of vials

Mix FUZEON

1. Draw up 1.1 mL/cc of sterile water with the large syringe
2. Inject sterile water into FUZEON
3. Gently mix, do not shake FUZEON
4. Make sure FUZEON is completely dissolved

Give the Injection

1. Choose and clean the injection site
2. Draw up 1 mL/cc of FUZEON with the small syringe
3. Pinch skin
4. Pierce skin at 45-degree angle
5. Inject FUZEON

Dispose of Supplies

- Dispose of used syringes and any supplies that may have blood on them by placing them in the sharps container
- Other used supplies, including vials, may be placed in the trash

Clean Your Preparation Mat

- Wipe down thoroughly with an alcohol pad

For additional details on FUZEON, please see the accompanying patient package insert.
